BEFORE REPAIR

- Turn off the power supply. Using a 10Ω, 5 W resistor connect both ends of power supply capacitors (C711, C712, 3300 μF) in order to discharge the voltage.
- Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 50 Hz/60 Hz in NO SIGNAL mode should be shown below with respect to supply voltage 110 V/127 V/220 V/240 V.

Power supply voltage	AC 110 V	AC 127 V	AC 220 V	AC 240 V
Consumed current 50 Hz	100~500 mA	70~470 mA	50~250 mA	40~240 mA
Consumed current 60 Hz	97~476 mA	68~457 mA	49~244 mA	39~236 mA

PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions is noticed:

- \*No sound is heard when the power is switched ON.
- \*Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedure outlined below:

- Switch OFF the power.
- Determine the cause of the problem and correct it.
- Switch ON the power once again.

Note:

When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and then ON again.

**1 Connect the stereo connection cables**  
(included with the turntable, tuner, graphic equalizer, compact disc player and cassette tape deck).

**2 Connect the L-type cables**  
(included with the turntable, compact disc player, graphic equalizer and cassette tape deck).

**Note:**

Connect the L-type cables included with a compact disc player as illustrated below in either case:

- When a graphic equalizer does not have the remote control terminals.

- When a graphic equalizer is not used in combination with these components.

Compact disc player

Cassette tape deck

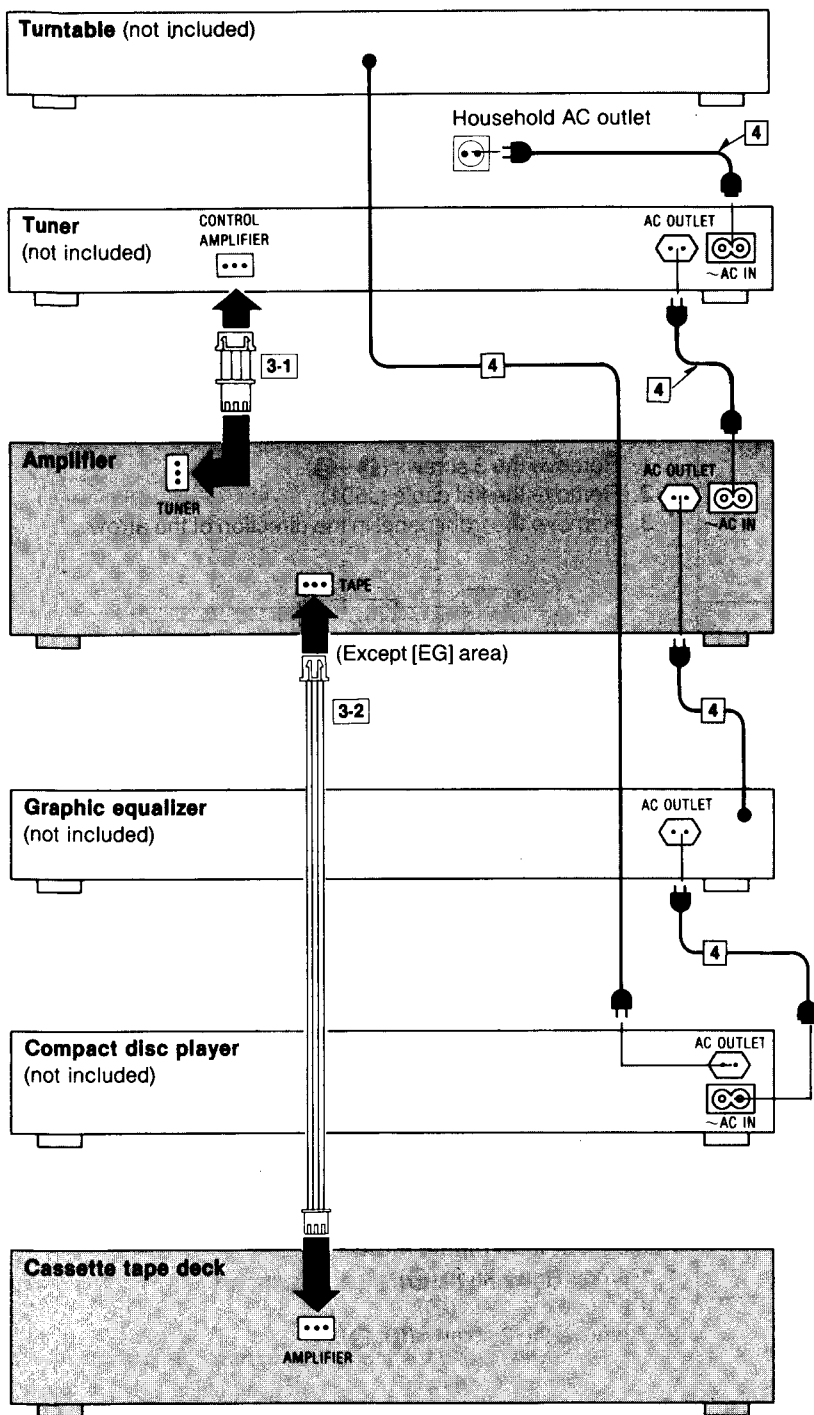

**“GND” terminal of the amplifier**

This terminal is for use with a turntable which has a ground wire.

**“EXT” terminals of the amplifier**

When these terminals are not in use, be sure to insert the shorting pins (included).

**3 Connect the flat cables.**

- 3-1 Connect the 3-core flat cable** (included with the tuner).
- 3-2 Connect the 3-core flat cable** (included with the cassette tape deck).

**4 Connect the AC power supply cords.**

Connect this cord only after all other cables and cords have been connected.

**Notes:**

1. The configuration of the AC outlet and AC power supply cord differs according to area.
2. Connect the AC power supply cord included with a compact disc player to the AC outlet of the amplifier as illustrated below in either case:

- When a graphic equalizer does not have the AC outlet.
- When a graphic equalizer is not used in combination with these components.

**■ About the AC outlets of the each components**

Do not connect video-related equipment (such as a TV, etc.) to the AC outlets of these components. (These outlets are especially for audio equipment.) Also do not exceed the indicated power ratings when connecting to these outlets.

- **“SWITCHED” outlet** (For tuner)  
Power is controlled by the power switch.
- **“UNSWITCHED” outlets** (For amplifier, compact disc player, graphic equalizer)  
Power is always available, regardless of power switch setting.
