Application Circuit

- (1) Initialization, muting mode
(One channel only is shown below.)

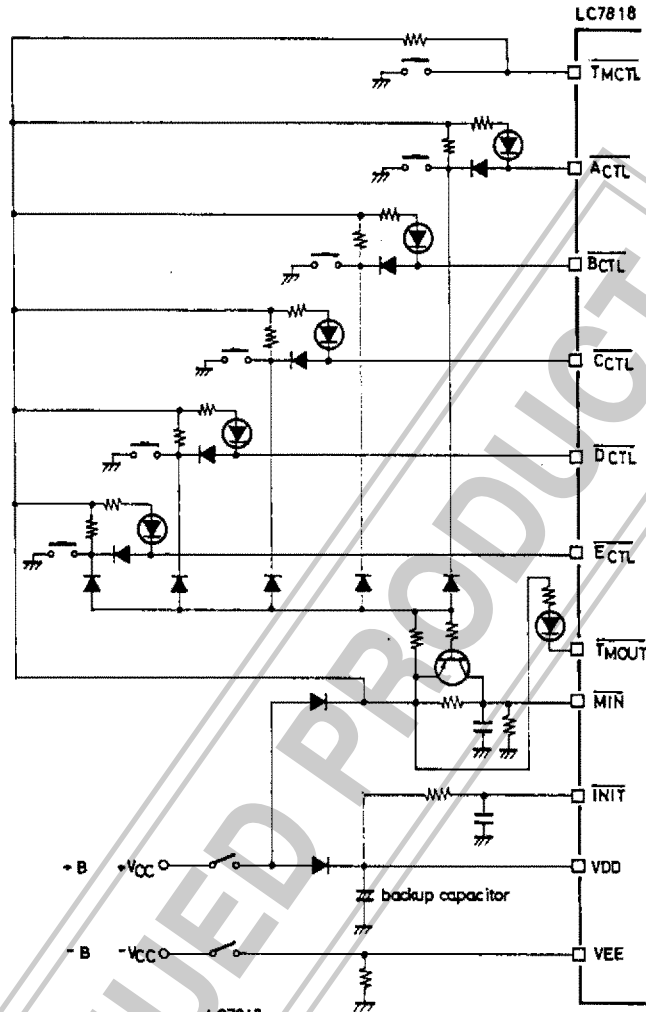

- (2) Backup mode
(Audio section, MUTE circuit are omitted.)

If the power switch is set to the primary side at the backup mode and it takes time for +B to fall when power is turned OFF, the MIN pin must be brought to "L" state before the ACTL to ECTL, TMCTL pins are brought to "L" state or the MIN pin must be brought to "L" state within OSC period x 3 in case the ACTL to ECTL, TMCTL pins are brought to "L" state earlier; otherwise the function may be shifted to another.

(3) Auto function, backup mode

(4) Auto function, initialization, reset mode
