

DUAL INPUT LOW DROPOUT REGULATOR**Features**

- Adjustable or Fixed Output
- 520mV typ. Dropout at 5A in dual power voltage mode
- Remote Sense Pin Available
- 2% Accuracy Over Temperature Range
- Build-in Over Temperature Protection
- Build-in Current Limit
- 5 Pin TO-220 and TO-263 Packages
- No Supply Sequencing Problems in Dual Supply Mode

General Description

The APL1581 series of high performance positive voltage regulators are designed for use in applications requiring very low dropout voltage at 5Amp.

The APL1581 can provide a output voltage at the range of 1.25V to 2.55V , where both 5V and 3.3V voltage supplies are available.

The superior dropout characteristics result in reduced heat dissipation compared to regular LDOs. The APL1581 also provides excellent regulation over line , load , and temperature variations.

Current limit is trimmed to ensure specified output current and controlled short-circuit current. On-chip thermal limiting provides protection against any combination of overload that would create excessive junction temperature.

The APL1581 is available in both the through-hole and surface mount versions of the industry standard 5-Pin TO-220 and TO-263 power packages.

Applications

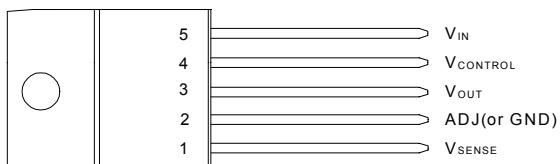

- Microprocessor Supplies
- Chip Set Supplies
- VGA Card Power
- LCD Monitor Power

Pin Description

PIN		I/O	Description
No.	Name		
1	VSENSE	I	Positive side of the reference voltage, which allows remote sensing to obtain excellent load regulation.
2	ADJ	O	Negative side of the reference voltage, which allows to use resistor divider to set an expect output voltage. A small bypass capacitor can be connected from this pin to ground to improve PSRR performance.
	GND	O	For fixed voltage devices this is the bottom of the resistor divider that sets the output voltage.
3	VOUT	O	Output pin of the regulator, which connects to the TAB. A minimum of 10µF capacitor must be connected from this pin to ground to ensure the stability.
4	VCONTROL	I	Supply pin of the control circuitry, Which must be always higher than VOUT for the device to regulate. (see electrical characteristics)
5	VIN	I	Power input pin of the regulator, which must be always higher than VOUT for the device to regulate. (see electrical characteristics)

Q _{JC}	Junction-to-Case Thermal Resistance	Power Transistor			3.0	°C/W

Note 1 : Low duty cycle pulse test with Kelvin connections are required to maintain data accuracy .

Note 2 : Dropout voltage is defined as the minimum difference between V_{IN} and V_{OUT} required to maintain 1% V_{OUT} regulation .

Note 3 : Minimum load current is defined as the minimum current required at the output to maintain V_{OUT} regulation.

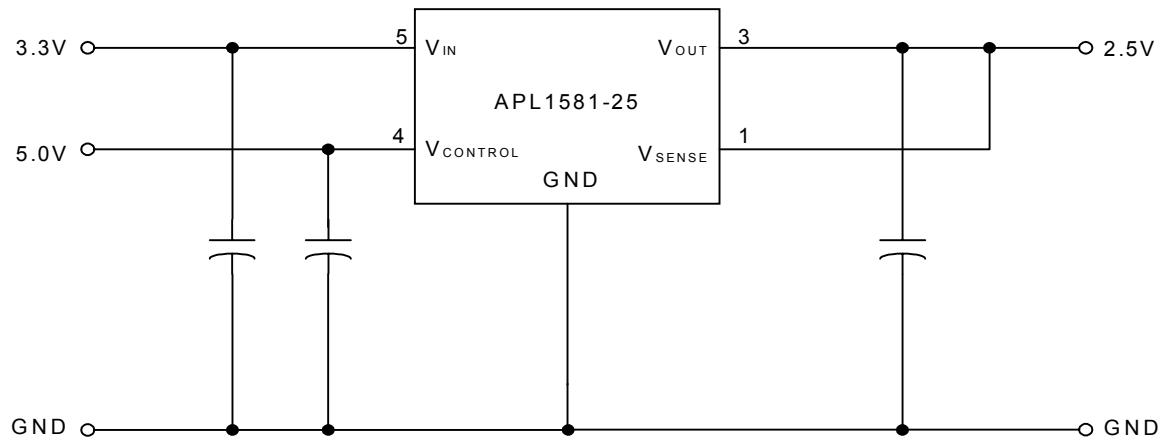

Application Circuit

$$* V_{OUT} = V_{REF} \left(1 + \frac{R_2}{R_1} \right) + I_{ADJ} * R_2$$

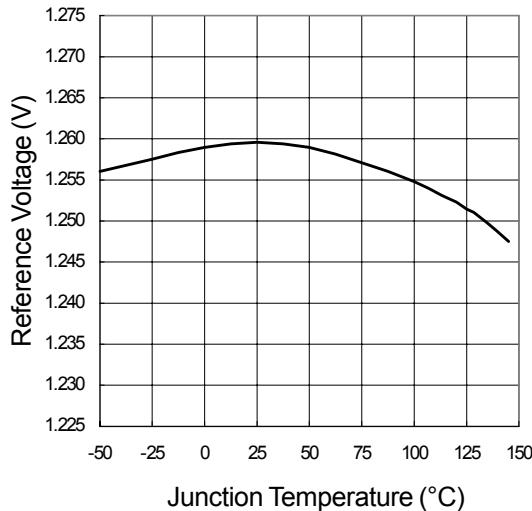

* R1 is typically in range of 100Ω to 125Ω to satisfy the minimum load current requirement
